

DAY 1

Patient Journey at BHG

STAGES OF RECOVERY

Overcoming addiction made possible.

As a patient, you'll almost certainly need more treatment at the start to get stabilized and help you stop using. As you progress, you need less treatment, and you'll see us back off as your life fills back up with normal and healthy things. Our point, our goal, is never to give you treatment for treatment's sake. It's to get you into recovery. Recovery is the goal, treatment is how you get there, and medication makes treatment possible.

STAGE 7/6: Induction

M, T, W, TH, F, S, SUN
Daily In-center Dosing

STAGE 5: Stabilization

M, T, W, TH, F
In-center Dosing, With Weekend Take-home Doses

STAGE 4: Stabilization

M, T, TH, F
One Dose Per Visit
Alternating Take-home Doses

STAGE 3: Stabilization

M, W, F
One Dose Per Visit
Alternating Take-home Doses

STAGE 1: Stabilization

One Visit Per Week
One In-center Dose, With Six Take-home Doses

STAGES T AND M: Maintenance

Stage T: One Visit Every Two Weeks
Stage M: One Visit Every 28 Days
One In-center Dose, With Remaining Take-home Doses

Re-evaluation every 90 days

*Patients must follow state and federal regulations. Specific days and stages will vary by state. Induction and Stabilization stages may take 9 to 18 months depending on patient plan and state requirements. In most situations, patients who relapse typically move back one stage, or if out of treatment for 30 days or less it may carry over to time in treatment.
